

Air box security.

It is recommended to secure Airbox in RST and 912S machines.
Pictures show one of the possibility of securing the airbus.

The aim of airbox security is:

1. stop possibility of moving out of rubber connection, what will cause a leak and effect as a loss of power.
2. stop possibility of moving out of rubber connection and avoid touching rotor head control mixer by, what can block the control system.
